## WORK EXPERIENCE

Amazon, New York, NY August 2019 — Present  
Software Development Engineer

- Optimized Big Data pipeline to reduce operational load by 30% and monthly infrastructure costs by 30%

TripAdvisor, Needham, MA September 2017 — July 2019  
Software Engineer

- Designed and implemented the Unified Inbox API for sending and receiving different types of messages and alerts on TripAdvisor via the web and the mobile clients
- Worked collaboratively with cross functional teams to quickly bring new features supporting the Social Initiative to the TripAdvisor.com, mainly using React and Java microservices
- Improved performance of single page application by discovering and eliminating bottlenecks using open source tools

TripAdvisor, Needham, MA May 2016 — August 2016  
Software Engineering Intern

- Developed custom full-stack solutions to meet clients' needs and increase revenue
- Collaborated with product managers to measure and improve profitability of advertisements using Big Data technologies
- Leveraged a wide variety of tools such as static analysis and code reviews to create robust code

Mimir Insights, Medford, MA October 2014 — May 2016  
Software Engineer - Front End

- Designed and built front end web application for a biotech information startup using Django and AngularJS. <https://www.mimirinsights.com/>
- Created a Salesforce integrations plugin to bring data to Salesforce.com
- Developed new features to be released to clients on a weekly basis in collaboration with other students
